

Why You Should Adopt CI/CD

The best tool for your digital transformation.

OVERVIEW

What is CI/CD

Benefit of CI/CD

Conclusion

What Is CI/CD ?

CI/CD are DevOps practices that allows for the automated streamlining of code generated from multiple sources into a single well tested pipeline that exits with the deployment of well verified application into the production environment.

Benefits of CI/CD

01 For The Business

02 For your Developers

Benefits to your Business

CI/CD allows for the rapid deployment of new releases through automation of the processes involved in the release of new code. This will enable our business to significantly shorten our time to market. thus enabling us deliver new products faster and cheaper. Increasing revenue and give us a competitive edge.

Automating most aspects of our product delivery through CI/CD means that we can deliver new features quickly to our clients. This improves our customer satisfaction and retention . Moreover, satisfied customers means more referrals thereby more revenue for the company.

Benefits To Your Developer

Better code quality

Smoother path to production

Faster bug fixes

Collaboration and communication
